VACTRAC™ SERIES VTC24/128 DISTRIBUTED I/O CONTROL

VACTRAC 24/128 CONTROL SYSTEM

Vacuum conveying has never been more simple or versatile than with AEC's new VacTrac™ Series 24/128 Controller. The Vactrac 24/128 controller from AEC features enhanced graphics and control of up to 24 vacuum conveying pumps, 128 loading stations and 128 purge valves. The 24/128 controller utilizes a DeviceNet distributed I/O network, and standard features include an Allen-Bradley CompactLogix controller with a 10" color touch-screen operator interface.

ONE TOUCH. TWO CABLES. TOTAL CONTROL.

The ArmorBlock distributed I/O modules and KwikLink flat wiring are compatible with DeviceNet communications. The network approach reduces installation costs by minimizing wire runs, and allows for easy expansion and "hot-swapping" of components, eliminating costly downtime.

STANDARD FEATURES

- Time fill loading
- Prioritized station loading
- Manifold line sharing
- Built-in system diagnostics
- Add new equipment and/or equipment options without shutting down the system
- Optimized for blender applications

OPTIONAL FEATURES

- Additional touch-screen operator interfaces for multi-location access within the plant
- Multiple vacuum pump and filter cleaning options
- Line purging capability
- Closed loop conveying
- Local station On/Off control
- Centralized remote proportioning valve control
- Blowback filter cleaning at the loading station
- Vacuum receiver positive discharge
- Volume-fill of vacuum receiver
- Low-level indication in supply hoppers
- Local and/or centralized alarms
- Ethernet capabilities
- Supply power noise filter surge/suppressor
- Granulator unloading
